ADDITIONAL FACTORS FOR EVALUATING THE VIDEO RECORDINGS

There are numerous other factors that need to be considered when reviewing and evaluating the videos and audio recordings of this incident. Those factors are:

- A.** Video recording devices record within the video and sound capabilities available, and they record objectively. Video recordings lack the history, perspective, and interest of the people involved. The positions, angles, obstacles, lighting, and distance from the incident are also factors that need serious consideration.
- B.** Video recording devices also record more information about a particular scene or incident than the person(s) involved in the incident can process during the critical incident. Video recording devices rarely record an event from the same perspective of the officer. It captures the action but not the perception, decision making, focus, or intent of the officer. Video recordings often miss tactile cues or other actions of a subject.
- C.** The speed of the incident is remarkable. The speed and complexity of rapidly evolving situation(s) that occur during use of force encounters are difficult concepts to comprehend by only watching the video.

The documents received from OOCIC were submitted to the electronic BCI case file and were attached to this report. The disks received from OOCIC were submitted to the

On March 14th, 2025, Special Agent Jon Lieber of BCI submitted one flash drive for the purpose of forensic video analysis. Special Agent Lieber requested video presentations be created from video files contained on the flash drive. The item submitted will be referred to as ITEM ONE throughout the body of this report. The process, as it pertains to this case, is as follows:

- Inspect ITEM ONE to ascertain that no damage exists
- Generate and save a working copy of the contents of ITEM ONE
- Utilize software to create video presentations as requested
- Produce a data DVD of video presentations

On April 7th, 2025, ITEM ONE was checked out of the evidence room by Senior Analyst David Loomis.

ITEM ONE was a SanDisk Ultra 16GB flash drive with no label. ITEM ONE was inspected for damage and no damage was found. The contents of ITEM ONE were copied and verified via SHA256 hash using Quick Hash 3.0.4.

ITEM ONE contained six .mp4 video files:

Filename	Video	Audio	View
Ofc. [REDACTED] BWC.mp4	1280 x 720 H264	48kHz Stereo MP4A	Bodyworn
Ofc. [REDACTED] WC.mp4	1280 x 720 H264	48kHz Stereo MP4A	Bodyworn

The six .mp4 video files from ITEM ONE were imported into the Adobe Premiere CC 2025 video analysis software for review. A new timeline was created and the video files were synchronized based upon audio cues.

The Premiere video timeline was imported into the Adobe After Effects CC 2025 video analysis and compositing software for the creation of the video presentations. A new composition was created to show all six camera views. Frame counters, audio waveforms, and timecode were added to the composition. The composition was duplicated for the creation of the original and half-speed presentation. Title slates were added and the two video presentations were rendered out as universal .mp4 video files for demonstrative purposes.

The two video presentations were placed onto a data DVD as work product. A total of three copies of the DVD were created.

On April 21st, 2025, the three DVDs were released to evidence for shipping, along with ITEM ONE.
