Analytical findings offered above were determined using macroscopic examination and other accepted forensic drug chemistry methods. Where applicable, an estimate to the measurement uncertainty associated with the weight of an item has been provided. The coverage probability in such instances is 95.45% (k=2). Hypergeometric sampling may be specified in the findings above. The application of hypergeometric sampling establishes a minimum 95% confidence level that at least ninety percent 90% of the units in the sample are as reported.

Based on scientific analyses performed, this report contains opinions and interpretations by the analyst whose signature appears above. Examination documentation and any demonstrative data supporting laboratory conclusions are maintained by BCI and will be made available for review upon request.
