**Investigative Activity:** BCI Laboratory Firearm Report  
**Involves:** De'Shawn Vaughn (S)  
**Activity Date:** 06/13/2024  
**Activity Location:** 4055 Highlander Parkway, Richfield, Ohio 44286  
**Authoring Agent:** SA Andrew J. Harasimchuk #170

### Narrative:

On June 13, 2024, Ohio Bureau of Criminal Investigation (BCI) Special Agent (SA) Andrew Harasimchuk (Harasimchuk) received the BCI Laboratory Analysis report for items submitted to the BCI Laboratory on May 17, 2024. The analysis requested was to determine or confirm which firearm was the source weapon for the recovered projectiles and cartridge casings.

Thirty-eight items were submitted to the lab for analysis. In addition, thirteen items from BCI investigation 2024-1472 were compared to some of the thirty-eight items that were submitted to the laboratory for this case.

The report originated from the Firearms section of the laboratory and was authored by Forensic Scientist Regan Lambert.

SA Harasimchuk reviewed this report and noted the following:

2024-1474	18	23	CS 2 Item #8	223 Remington cartridge case	

BCI Investigation 2024-1474 BCI Lab Item #37, 2 lead fragments (Matrix Item #53/ME Item #25) were unsuitable for comparison.

The following should be noted in relation to the Remington 30 caliber class bolt-action rifle, Model 700, bearing a serial number of [REDACTED] (Lab Item #12/Matrix Item #17/CS 2 Item #2) and the Remington 30 caliber class bolt-action rifle, Model 700, bearing a serial number of [REDACTED] (Lab Item #13/Matrix Item #18/CS 2 Item #3):

*\*\*For Items #12 and 13 the caliber was not marked anywhere on the firearm. Chambering/cycling of cartridges was conducted, and ultimately 308 Winchester cartridges were used for testing due to being able to chamber/cycle correctly as well as due to the evidence cartridge cases that the firearms were microscopically compared to.*

It also should be noted that Lab Item #30 (Matrix Item #35), a 308 Winchester cartridge case was inadvertently labeled as CS 2 Item #20 on the BCI firearms report. Lab Item #30 (Matrix Item #35), a 308 Winchester cartridge case should have been labeled as CS 2 Item #21.

### Comparison Conclusion Scale

The following lists the conclusions a Forensic Scientist may reach when performing comparisons. In reaching a conclusion, a Forensic Scientist considers the similarities and dissimilarities and assesses the relative support of the observations under the following two propositions: the evidence originated from the same source or from a different source.

A Forensic Scientist may utilize their knowledge, training, and experience to evaluate how much support the observed similarities or dissimilarities provide for one conclusion over another. A conclusion shall not be communicated with absolute certainty. It is an interpretation of observations made by the Forensic Scientists and shall be expressed as an expert opinion.

1	Source Identification	The observations provide extremely strong support for the proposition that the evidence originated from the same source and the likelihood for the proposition that the evidence arose from a different source is so remote as to be considered a practical impossibility.
2	Support for Same Source	The observations provide more support for the proposition that the evidence originated from the same source rather than different sources; however, there is insufficient support for a Source Identification. The degree of support may range from limited to strong or similar descriptors of the degree of support. Any use of this conclusion shall include a statement of the factor(s) limiting a stronger conclusion.
3	Inconclusive	The observations do not provide a sufficient degree of support for one proposition over the other. Any use of this conclusion shall include a statement of the factor(s) limiting a stronger conclusion.
4	Support for Different Source	The observations provide more support for the proposition that the evidence originated from different sources rather than the same source; however, there is insufficient support for a Source Exclusion. The degree of support may range from limited to strong or similar descriptors of the degree of support. Any use of this conclusion shall include a statement of the factor(s) limiting a stronger conclusion.
5	Source Exclusion	The observations provide extremely strong support for the proposition that the evidence originated from a different source and the likelihood for the proposition that the evidence arose from the same source is so remote as to be considered a practical impossibility; or the evidence exhibits fundamentally different characteristics
