Axon_Body_3_Video_2024-05-03_0142_X60A9740V – Trooper Spencer Day

(Duration: 1 hour, 29 minutes and 4 seconds)

At approximately 0142 hours (Axon video time), Trooper Spencer Day (Day) was the first law enforcement officer to make contact with Woodard. While on patrol, Trooper Day observed the truck driven by Woodard at the top of the exit ramp, parked off to the side straddling the fog line.

At the 02:10 mark of the video, Trooper Day was observed standing at the driver's side door knocking on the window to get Woodard's attention. Initially, Woodard was observed reclining back in the driver's seat. Woodard was also observed acknowledging Trooper Day by knocking on the window as well.

(Image #1)

At that point, Trooper Day asked Woodard questions such as if he was feeling okay. Woodard did not respond. When asked where he was coming from, Woodard replied, “up North.” While Trooper Day was trying to get answers, Woodard sat there and looked around in what appeared to be a paranoid manner. Due to Woodard's abnormal behavior, Trooper Day requested another unit to assist. [REDACTED] arrived a short time later.

ADDITIONAL FACTORS FOR EVALUATING THE VIDEO RECORDINGS

There are numerous other factors that need to be considered when reviewing and evaluating the videos and audio recordings of this incident. Those factors are:

A. Video recording devices record within the video and sound capabilities available, and they record objectively. Video recordings lack the history, perspective, and interest of the people involved. The positions, angles, obstacles, lighting, and distance from the incident are also factors that need serious consideration.

B. Video recording devices also record more information about a particular scene or incident than the person(s) involved in the incident can process during the critical incident. Video recording devices rarely record an event from the same perspective of the officer. It captures the action but not the perception, decision making, focus, or intent of the officer. Video recordings often miss tactile cues or other actions of a subject.

C. The speed of the incident is remarkable. The speed and complexity of rapidly evolving situation(s) that occur during use of force encounters are difficult concepts to comprehend by only watching the video.

The files containing the video footage was submitted to the physical BCI case file as item A (TCSO) and C (OSHP) for reference only.
